The U.S. lift Truck division located in Cleveland has a skilled team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's initial home-based lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled forklifts as part of a national equipment expansion venture. Initial product sales of this manufacturing equipment focused on large business groups, the armed services and on state-run companies. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division began trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical education became the new focus for enhancing quality and product development.

Home-based lift truck business for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of considerable growth of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to counter act competitive pressures in the US materials handling market. This venture greatly expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a modern plant which helped establish the business for the manufacture of high end added-value goods suited for export. In 1993, the company had a global sales network and started exporting designs they had developed through in-house technology, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into overseas markets.
